

HOW TO IDENTIFY YOUR BIKE - GEN 1

WHICH BATTERY MATCHES MY MOTOR?

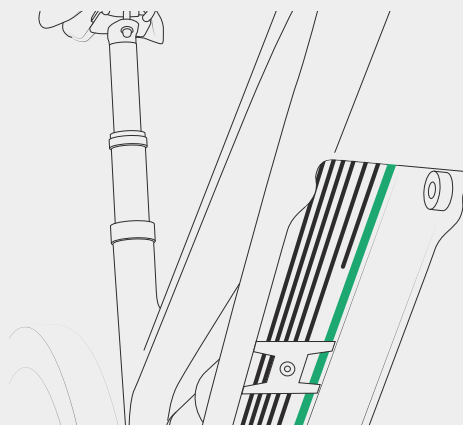

Important note: Shimano 1st Generation motors (E8000 and EP8) will work only with batteries from the same generation. The EP6 and EP801 are from Shimano's newer 2nd generation series, and are incompatible with 1st generation systems.

E8000 Motor: The E8000 motor features a Shimano logo set within a silver circle on the non-drive side, as shown above.

EP8 motor: The EP8 features a Shimano logo set within the middle of the cooling fins on the non-drive side, as shown above.

Once you remove the battery on a Gen 1 bike, the **thick** motor/battery cable will have a **black housing**.

COMPATIBLE YT BATTERY TYPES FOR GEN 1 BIKES:
540WH BATTERY PART NUMBER: YT-01-50S
720WH BATTERY PART NUMBER: YTX-001

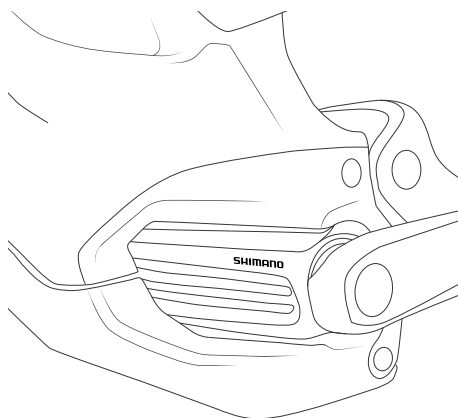

HOW TO IDENTIFY YOUR BIKE - GEN2

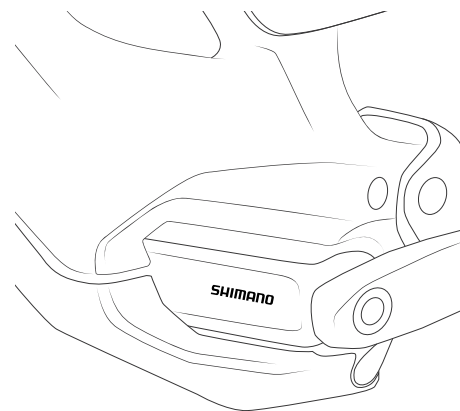

WHICH BATTERY MATCHES MY MOTOR?

EN

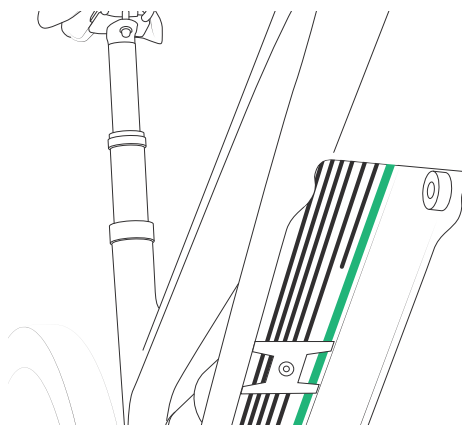

Important note: Fitting a Gen 1 battery into a Gen 2 system, or vice versa, is not dangerous, nor will it cause damage, but it will not work!

EP801 Motor: The non-drive side features a new cooling fin design with the Shimano logo on the upper half of the casing.

EP6 Motor: This motor features a smooth casing with no discernible cooling fins. The drive-side housing features an EP6 logo.

Once you remove the battery on a Gen 2 bike, the thick motor/battery cable will feature a **yellow housing**.

COMPATIBLE YT BATTERY TYPES FOR GEN 2 BIKES:
540WH BATTERY PART NUMBER: TPS-C18-50SD
720WH BATTERY PART NUMBER: YTX-C01
